

Atlas Neo Sensor 

THE TOUCH-FREE TAP FOR TODAY

MAKE IT WONDERFUL

FRANKE

THE RIGHT TAP FOR YOUR KITCHEN

Nowadays, many of us spend more time at home and in the kitchen than we used to in the past. We look for easy yet eco-friendly solutions for better hygiene at home. Meet Franke's new touch-free kitchen tap Atlas Neo Sensor, tailored to meet today's strict requirements on hygiene, sustainability, and convenience.

Busy hands?

Want to use the kitchen tap quickly without touching anything, like when your hands are all covered in cookie dough? The Atlas Neo Sensor touch-free function works even if the manual lever is in the closed position. This intuitive Start/Stop-sensor reacts instantly to your hand motion within 5-10 cm distance from it.

YOU CAN TOUCH THIS – OR NOT

The Atlas Neo Sensor is a hybrid kitchen mixer tap. You can operate it hands-free through the infrared motion sensor or by hand with the standard manual side lever.

A cool way to cut costs

With Atlas Neo Sensor, washing vegetables, rinsing off dishes, filling a carafe with refreshing drinking water and washing your hands is simple. The touch-free function comes in handy also because you do not even have to touch your tap after handling potentially bacteria-carrying perishable meats, chicken or fish. You can preset the temperature for the infrared motion sensor: to cut down on utility costs, we recommend you set it to pleasantly cool. Use the standard manual lever when you need warmer or colder water.

Good news for savvy chefs

A touch-free tap also saves time when cooking. Place the pot for pasta water into the sink, give the sensor a wave, and go on chopping vegetables. One handwave gives you an average of 2.5 liters because the water-flow stops automatically after 30 seconds! After dinner, you can run warm water for cleaning bigger pots and pans by using the standard manual side lever.

KITCHEN HYGIENE STARTS AT YOUR TAP

Since your new Atlas Neo Sensor is touch-free, it will not contribute to spreading germs, and will stay stain-, fingerprint- and smudge-free – and generally much cleaner – than your past standard taps. Having a touch-free tap in the kitchen makes sense in so many practical ways!

A perfect place for your touch-free tap

The kitchen is the place where, at home, we spend a big part of the day. Here, we cook together, eat together, spend family time and even meet a friend who's stopping by. And most of what we do in the kitchen involves the tap, in one way or another. Atlas Neo Sensor can help minimise the number of times you touch your tap.

Saving water saves money

Atlas Neo Sensor makes handwashing easy – actually even fun – for everyone, while reducing water consumption significantly. Just the small act of stopping the water-flow to properly soap and dry your hand helps you save at least 3 liters of water at every wash, slashing normal consumption by at least 50%.

A step up in sustainability

The kitchen tap is one of the most used items in the household and it is usually a spot where lots of water is wasted – often without noticing it. With your new Atlas Neo Sensor you can easily make a helpful contribution to a more sustainable future for us all.

No place for bacteria

The Atlas Neo Sensor is made from solid, poreless stainless steel, so that rust, limescale and other debris cannot build up in or on the tap and give germs a hiding place. Its easy-to-clean, seamless design comes without bulging parts.

Stainless Steel is timeless steel

The premium material used in Franke stainless steel kitchen taps makes the Atlas Neo Sensor extremely resistant to staining, acids, corrosion and extreme temperatures. These taps look good, not only for years, but decades!

HANDSOME AND HANDS-FREE

With touch-free
technology

The Atlas Neo Sensor is based on the Franke's popular design classic, the Atlas Neo. Choose from swivel spout, pull-out nozzle or pull-out spray versions in Stainless Steel or Industrial Black finishes. Offering long-lasting value and a stylish yet ageless design that transcends trends and time, the Atlas Neo Sensor is the ideal touch-free tap for every home!

Specifications

- ✓ Motion detection range 5–10 cm from sensor
- ✓ Sensor reacts instantly to hand movement
- ✓ Automatic self-closing after 30 sec.
- ✓ Power consumption: 0.2 mW
- ✓ Ideal operating pressure: 3 bar
- ✓ Uses 4 pcs 1.5 V AA Alkaline batteries *

* originally supplied with the tap (rechargeable batteries not recommended)

Pull-Out Nozzle Sensor

Pull-Out Spray Sensor

IT'S INSPIRINGLY INTUITIVE

You will intuitively see how easy it is to use the Atlas Neo Sensor: the infrared sensor, which reacts to hand movement, is on one side, and the standard manual single lever on the other. The water temperature for the touch-free function can be set and changed at any time.

In place in no time

With the Atlas Neo Sensor, you can upgrade any kitchen – easily and fast. The control box and compact battery case take up very little cabinet space under the sink. The simple three-step installation, even on your existing sink, makes this high-tech, low-maintenance tap a very sensible and convenient next step up!

Installation is as easy as 1-2-3: the tap, the control box and the battery case.
